

● Fiber Optic Downwelling Irradiance Sensor ($E_d(\lambda)$)

● SIO's Modular Aerial Sensing System (MASS)

LIDAR

significant wave height, sea surface height, peak period, peak wavenumber, peak direction

* DoppVis

high resolution currents from visible imagery of the ocean surface

cross-swath currents only available for high altitude flights (> 0.9 km)

Pyrometer
sea surface temperature

GPS-IMU
(Global Positioning System/Inertial Motion Unit)

DSLR Camera

* Hyperspectral camera ($L_t(\lambda)$)
downwelling radiance

Video

* Longwave Infrared
sea surface temperature

*** schematic is not to scale
